This Q&A has been written with the advice valid on 11 February 2022.

My child has been in close contact with someone who tested positive for corona and has no symptoms. Can my child attend school?
If your child has had contact with someone who tests positive for corona (whether via self-test or PRC) and your child has no corona-related symptoms, your child no longer needs to be quarantined and has to attend school.
It is advised, however, that a self-test should be done before coming to school. If the (self-) test is negative, your child has to come to school.
If a self-test is positive, immediately make an appointment at the GGD for a PCR test. Your child stays at home until you know the test result. If the test result is negative, your child has to return to school. Else, your child has to stay in quarantine as advised by the GGD or use the quarantine tool.

My Nursery/Primary child has been in close contact with someone who tested positive for corona and has mild symptoms (nasal colds, runny nose, sneezing, sore throat, occasional coughing and a temperature rise increase to 38 degrees) Can my child attend school?
If your child does get (mild) corona-related symptoms, your child must stay at home and do a self-test or a PCR test at the GGD.

Someone in my household tests positive for corona, my child has no symptoms. Can my child attend school?
